

Software Requirements Specification

Centsible

CSCE 3444.401 | Summer 2026

Project Information

Team Name: Squirtle Squad

Team Members: Hoang Bui, Andre Phanavanh, Austin Ridge, Muhammad Taha

Team Lead: Andre Phanavanh

Project Title: Centsible

Project Overview

Centsible is a personal finance tracker application that helps individuals take control of their finances by consolidating income, expenses, budgets, and billing reminders all onto a user-friendly dashboard. This application will help solve financial problems, and with all the clutter and running back and forth of logging everything onto a spreadsheet or on a notepad. Our finance tracker is geared towards individuals who want to know where their money is coming from and going to. It's for college students, renters, business owners, or even property owners who would like to get an idea of their finances to work towards a better financial future.

User Stories

US1: As a registered user, I want to see all the subscriptions I am paying for, so that I know how much I am paying each month.

US2: As a registered user, I want to track my property expenses and other necessities so that I can set up an emergency fund for when something unexpected happens.

US3: As a registered user, I want to see an overview of my balance, transactions, and budget all on a single dashboard, so that I can easily view my financial position.

US4: As a registered user, I want to add recurring bills with their due dates, so that I have active reminders when payments are due and ensure they are paid.

US5: As a registered user, I want to view a monthly breakdown of my spending by category, so that I can see my spending habits and identify these patterns.

Functional Requirements

FR1: User registration & authentication: allow users to create an account using their name, email, and password. Users will be able to log in and log out, and their sessions will expire after a period of inactivity.

FR2: Transaction management: user CRUD ability (create, read, update, delete) to include income and expenses. Each transaction will include the amount, date, category, type (income or expense), and description.

FR3: Budget management: user's ability to set a monthly spending limit. The application will calculate and display the overall budget at that time.

FR4: Bill & subscription tracker: Be able to add bills by their name, amount, and due date.

FR5: Dashboard & reporting: Display a dashboard of the user's current balance, income, expenses, transaction list, and budget progress through graphs.

Non-Functional Requirements

NFR1: Security: Password hashing and encryption algorithm

NFR2: Usability: User-friendly interface that is responsive and easy to navigate.

NFR3: Performance: Dashboard will load data quickly, within 2 seconds under normal network conditions.

User Roles

Role 1: Standard user (primary): Any registered person who uses the application to track personal finances. Will have full access to their transactions, budget, bills, and reports.

Role 2: Guest/Unauthenticated User: The guest can only access registration and login pages.

Scope

In Scope:

- User authentication
- Transaction management
- Monthly budget/expense management
- Billing & subscription tracker
- Dashboard
- Expenses reports

Out of Scope:

- Bank account integration
- Stock/Investment banking tracking
- Investment portfolio
- Tax preparation
- Mobile applications
- Push notifications

Priority of Features

Must Have:

- US1: Subscription tracker
- US2: Monthly budget limit
- US3: Dashboard view
- FR1: User registration & authentication
- NFR1: Security

Should Have:

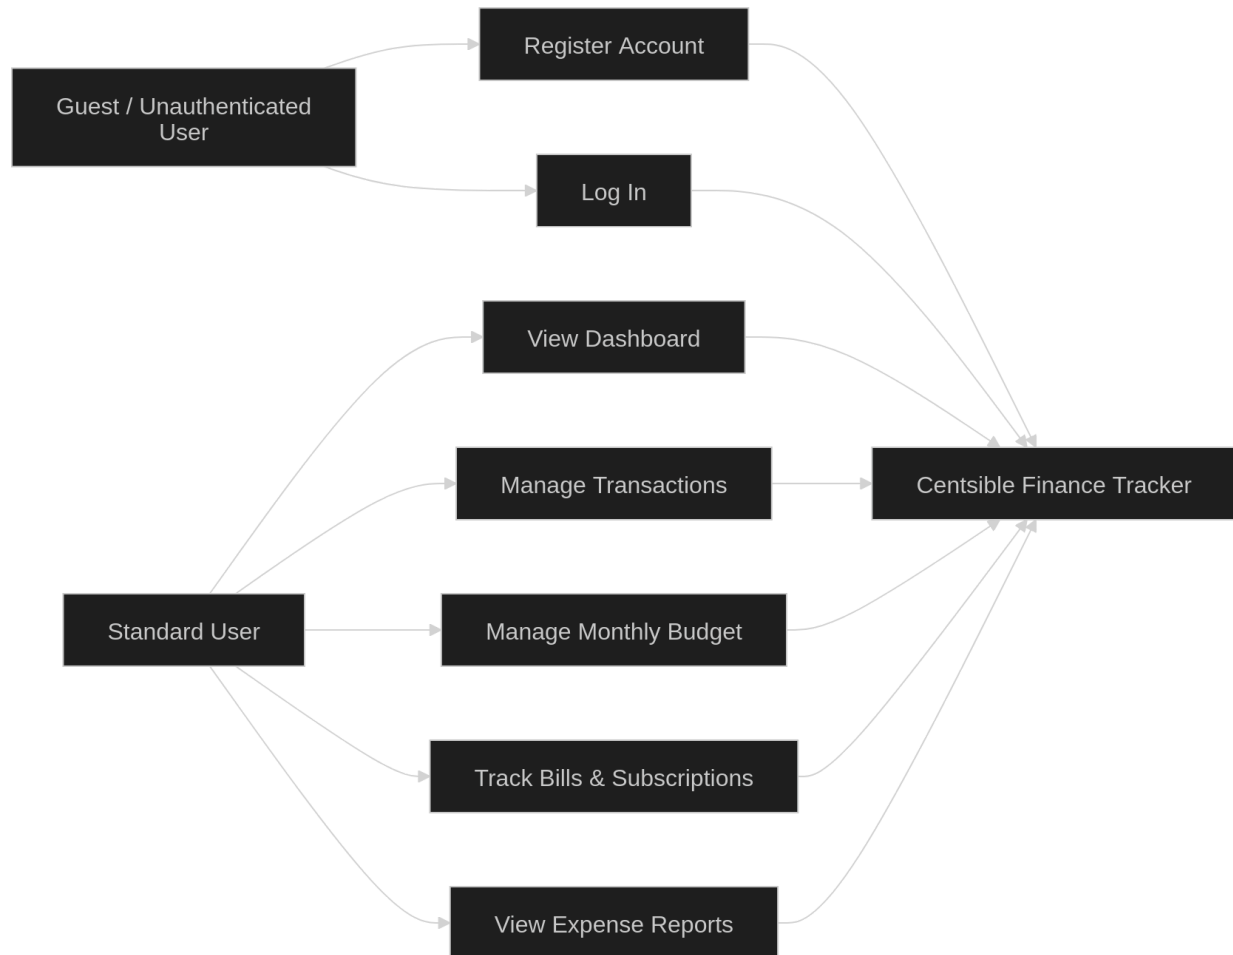

- US4: Bill & subscription reminder
- US5: Monthly breakdown summary
- FR5: Dashboard & reporting
- NFR2: Usability

Could Have:

- API account integration and auto-importing transactions
- Financial goal setting & progress tracking
- Exporting monthly expense breakdown
- Budget suggestions based on spending habits
